

Eindhoven Fellenoord

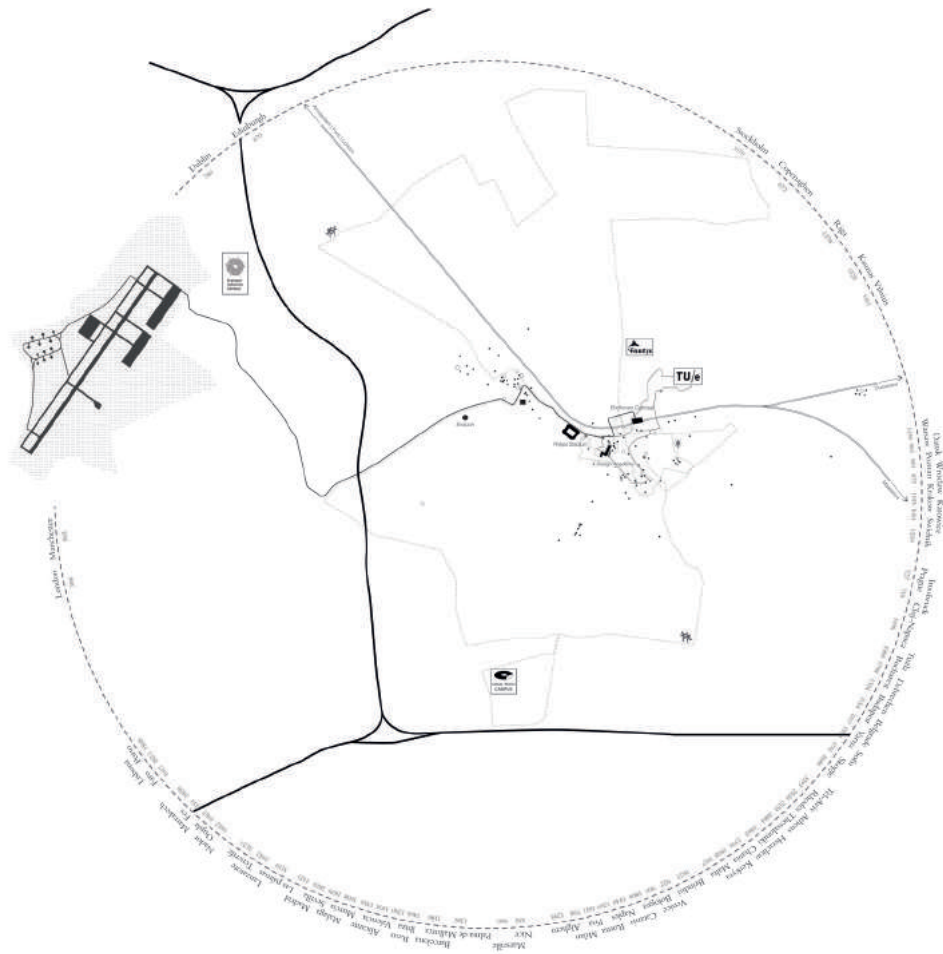

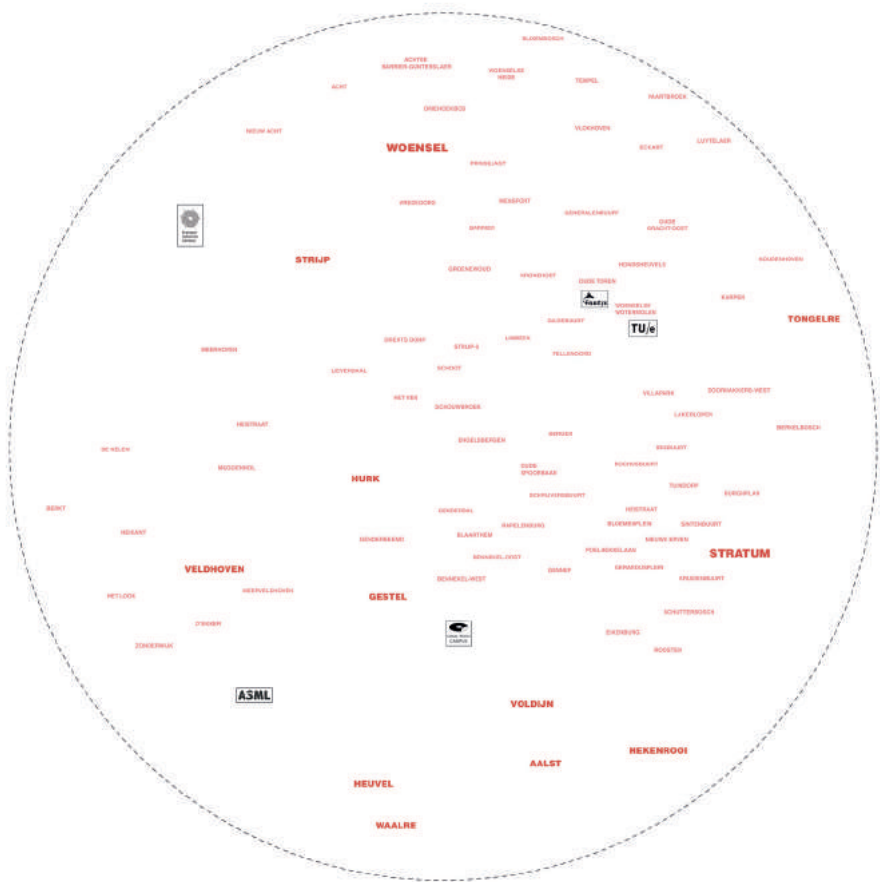

A Global Village in Transition

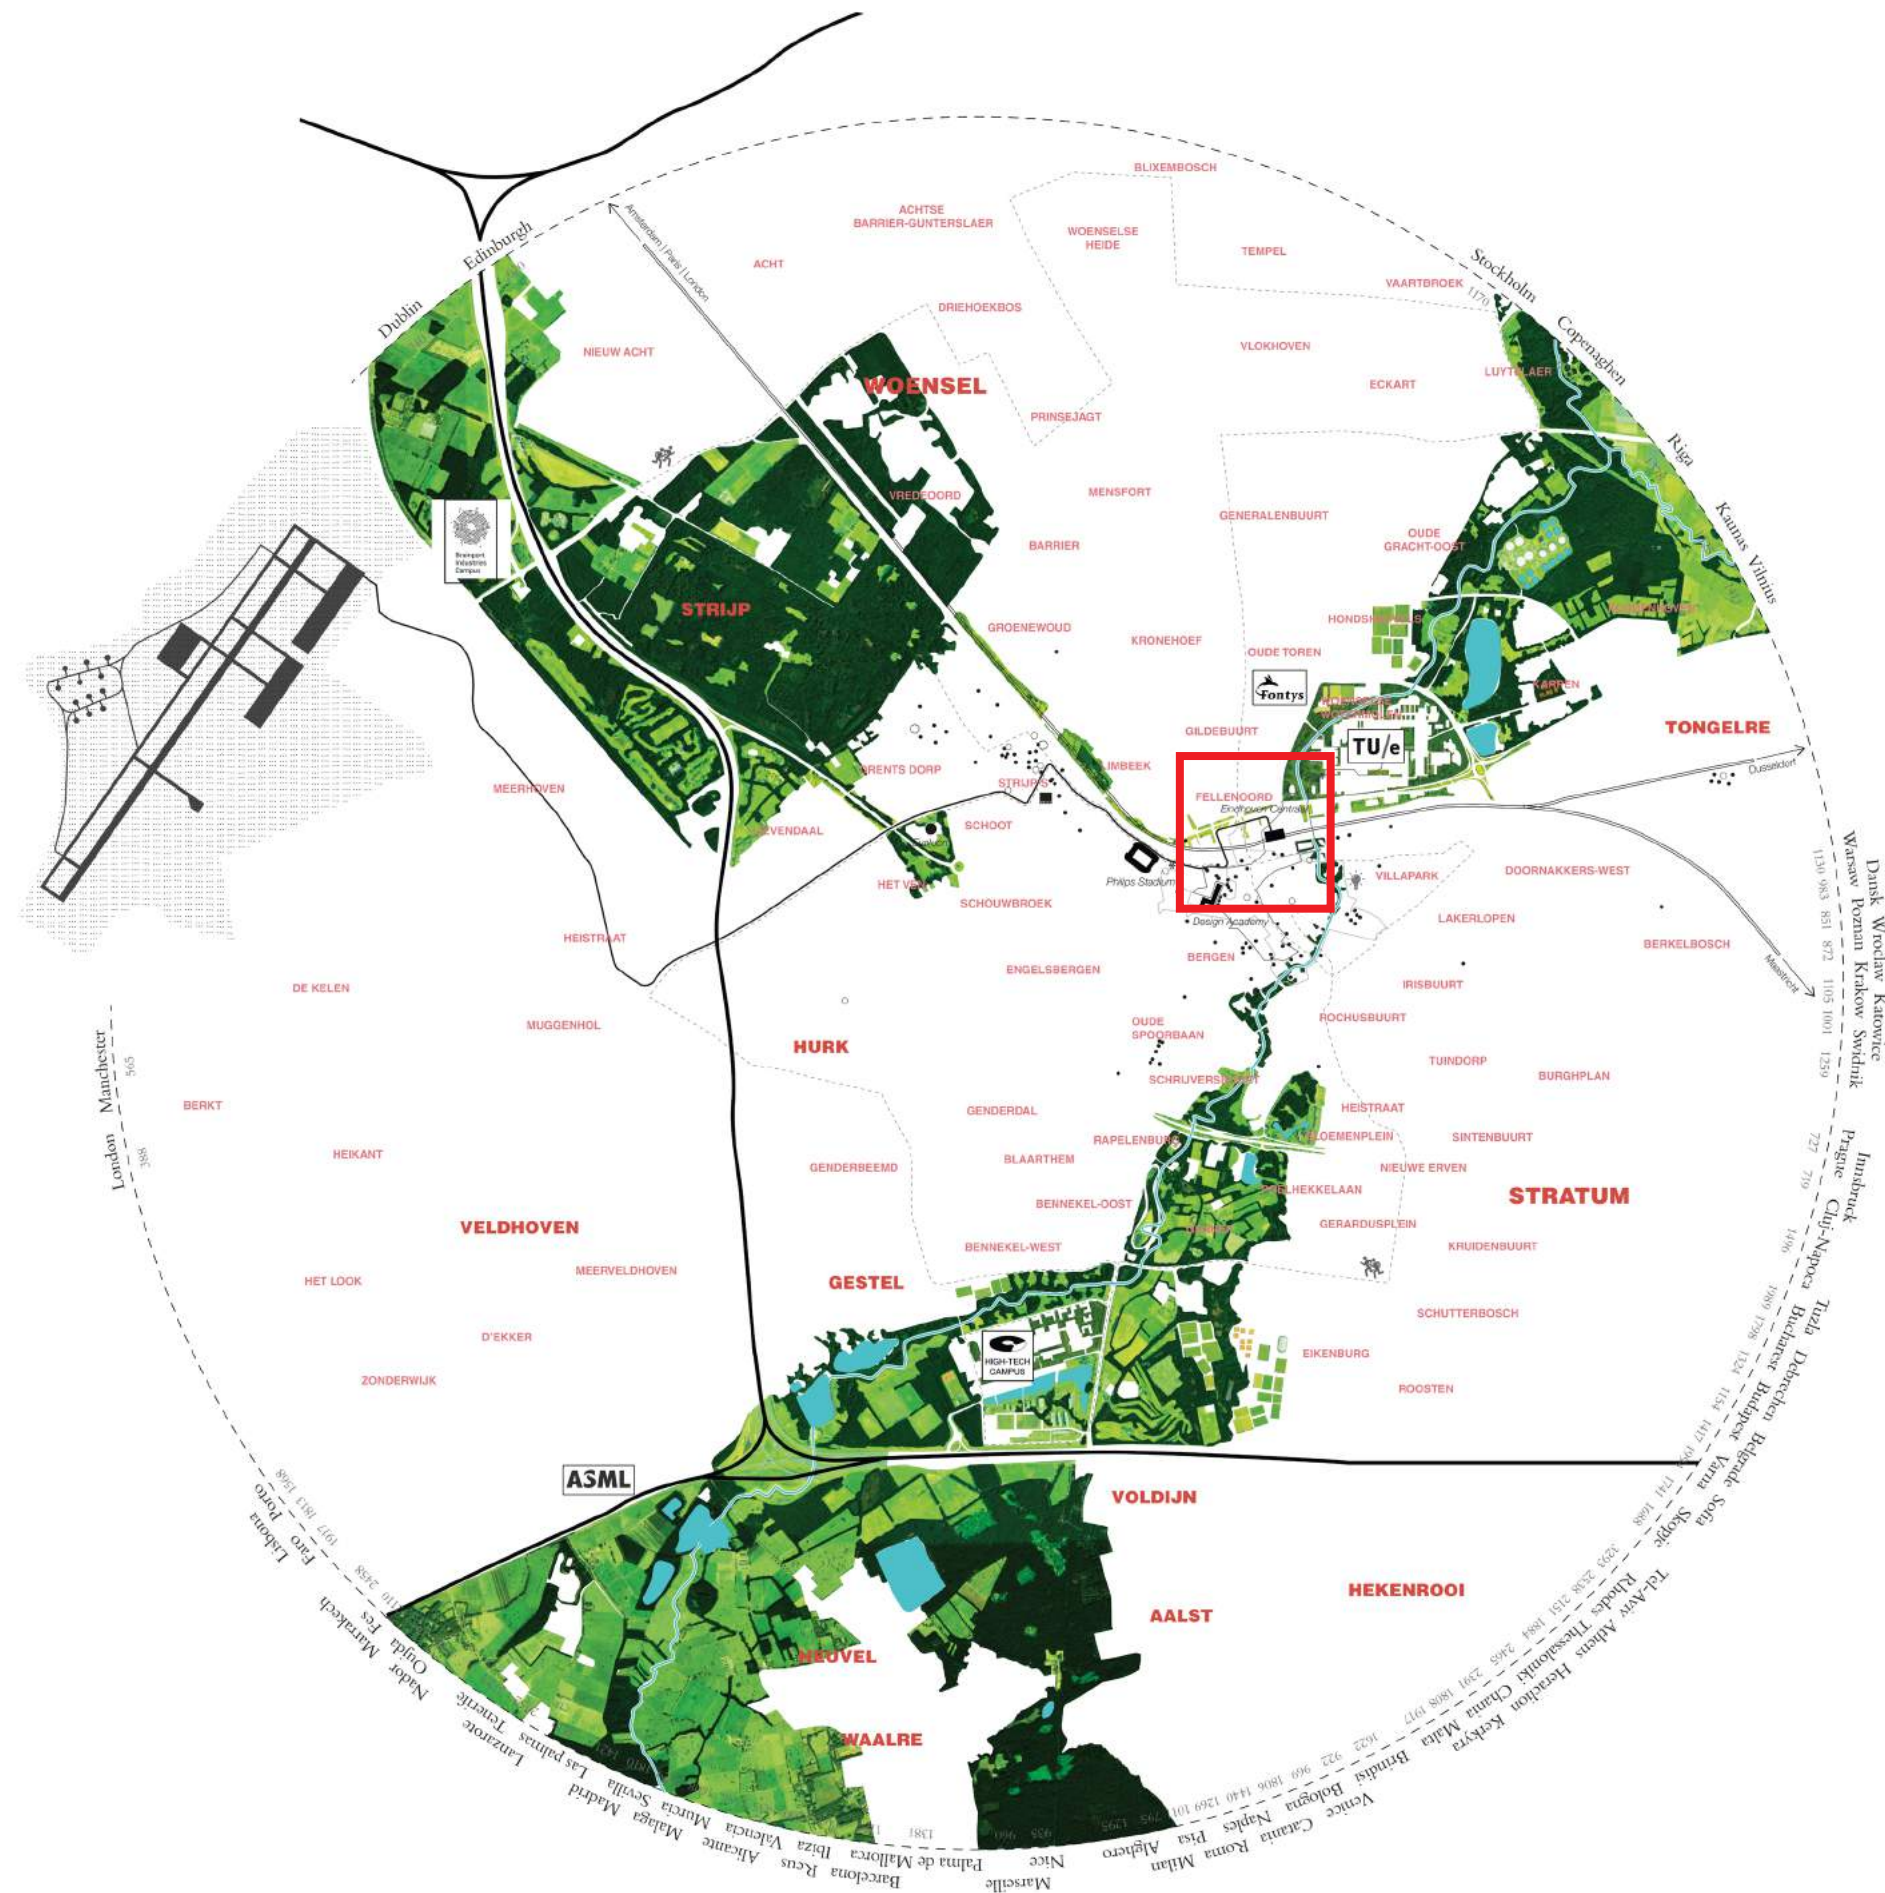

★1 km²

Urban Arcipelago

Eindhoven | Villages, Green, Infrastructure

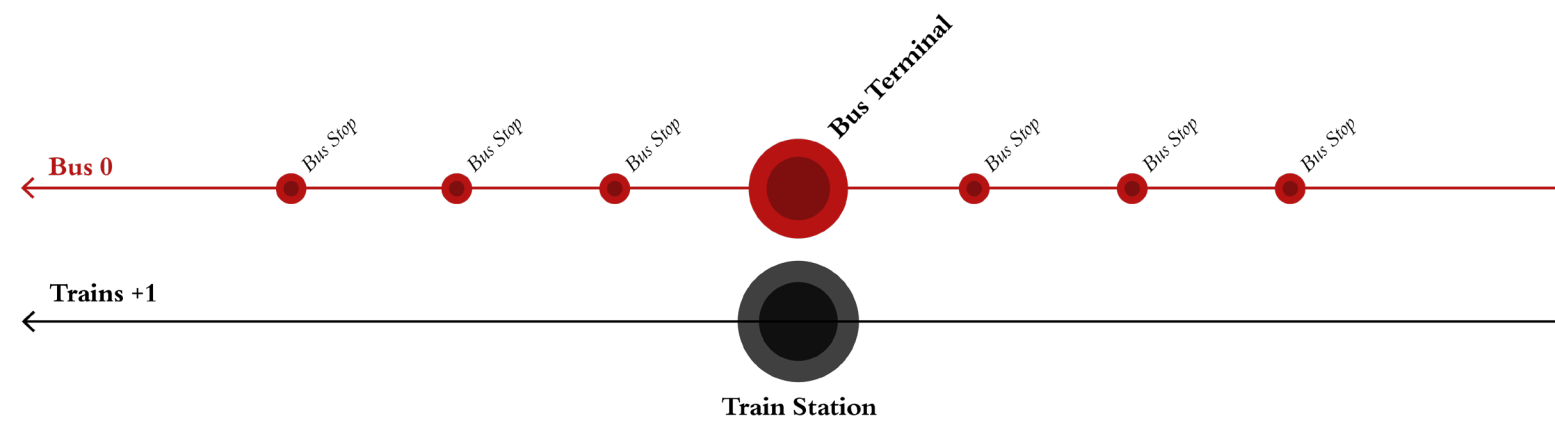

Eindhoven | International, Regional, Local

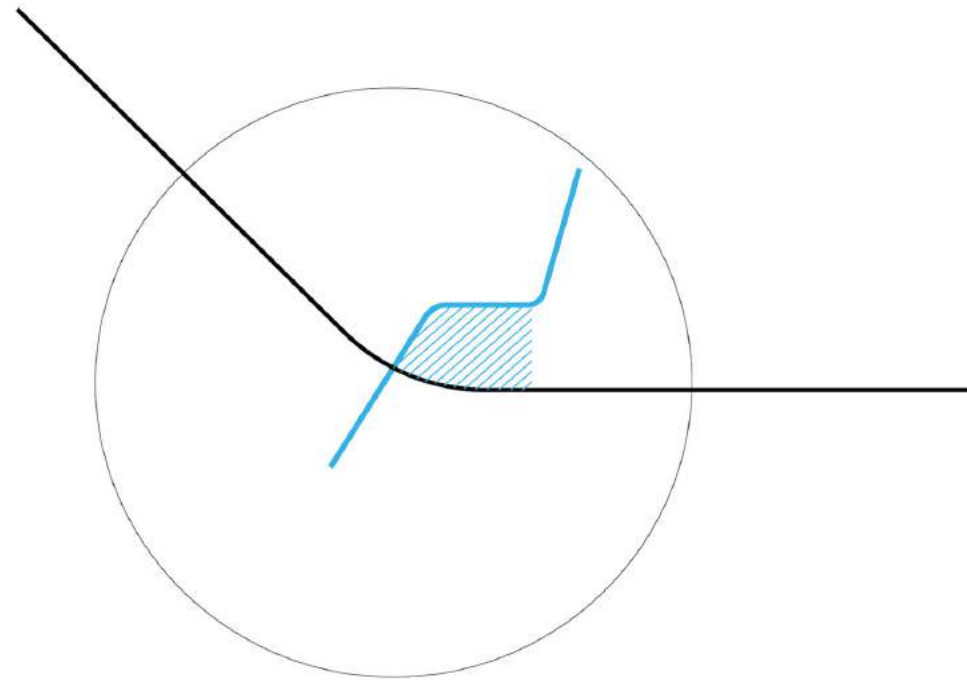

Urban Arcipelago

Criticalities | A congested Hub

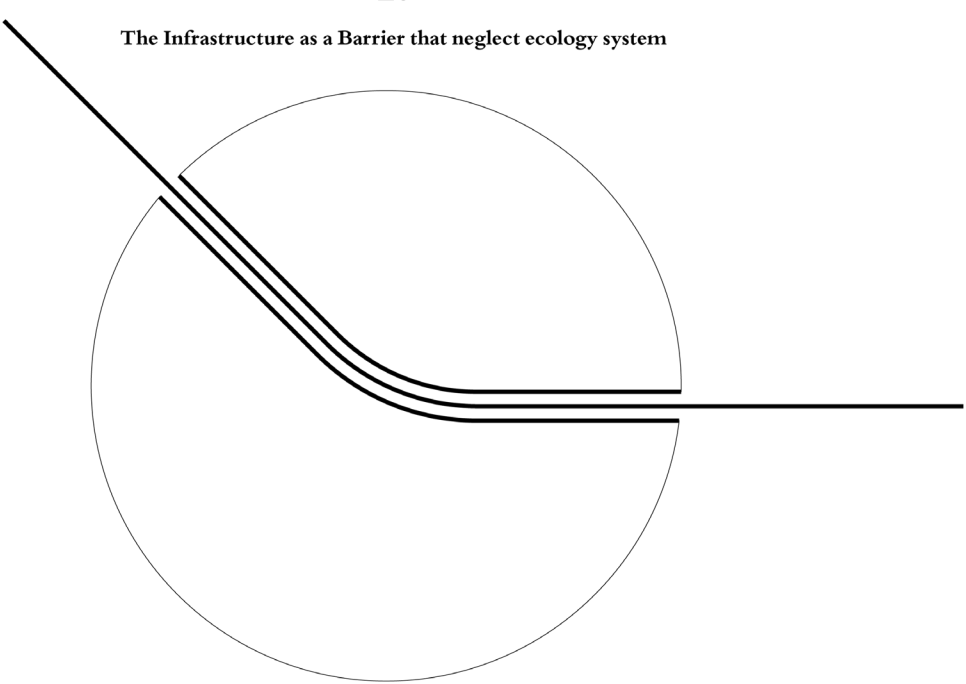

Bus Terminal and stops
Current situation

Criticalities | A Flooding Water System

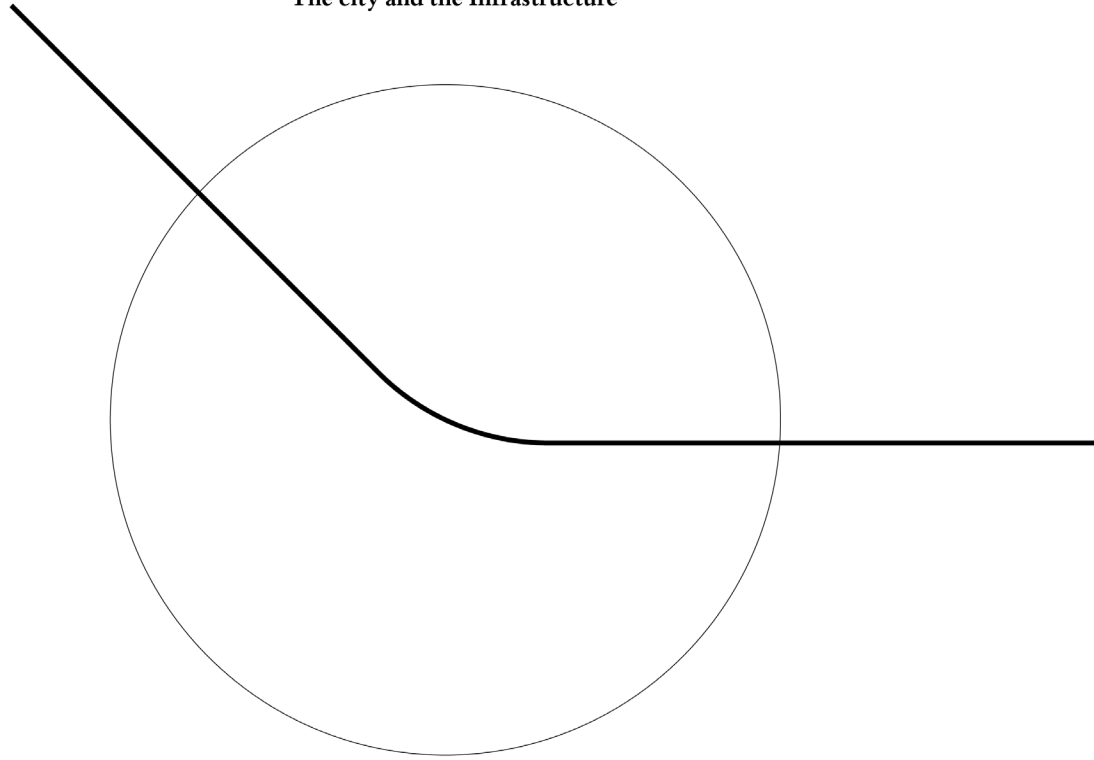

Criticalities | An Infrastructural Barrier

Integrating Infrastructures

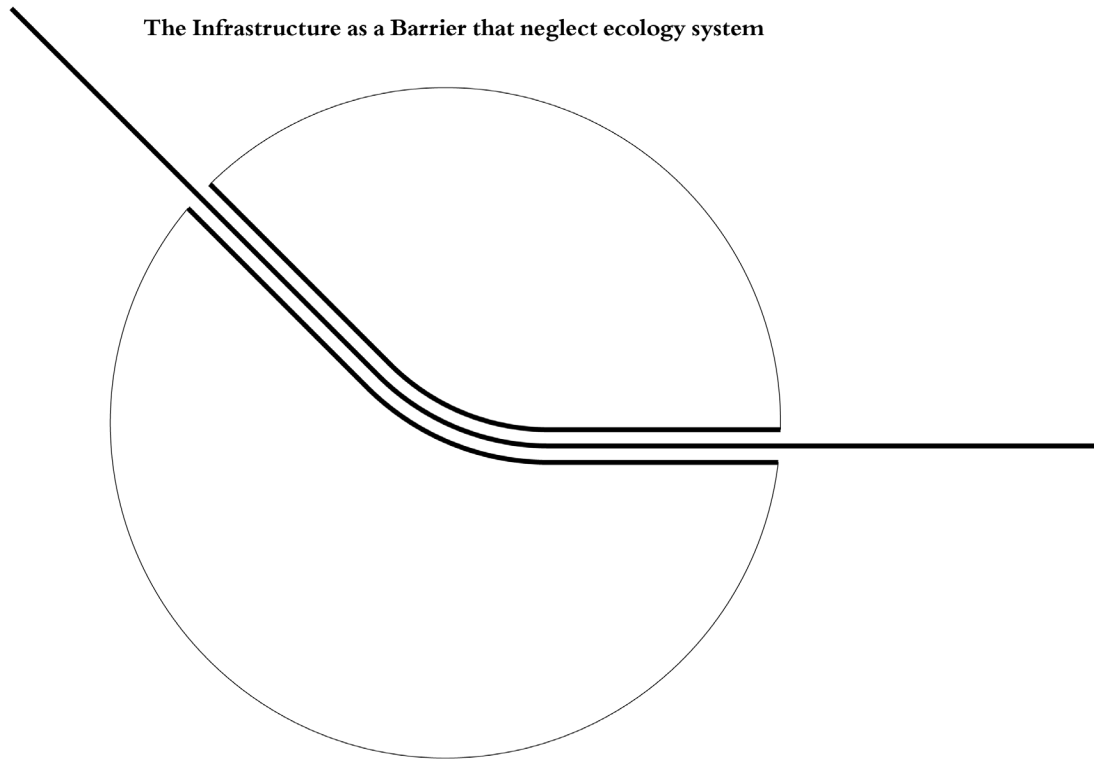

1.

The city and the Infrastructure

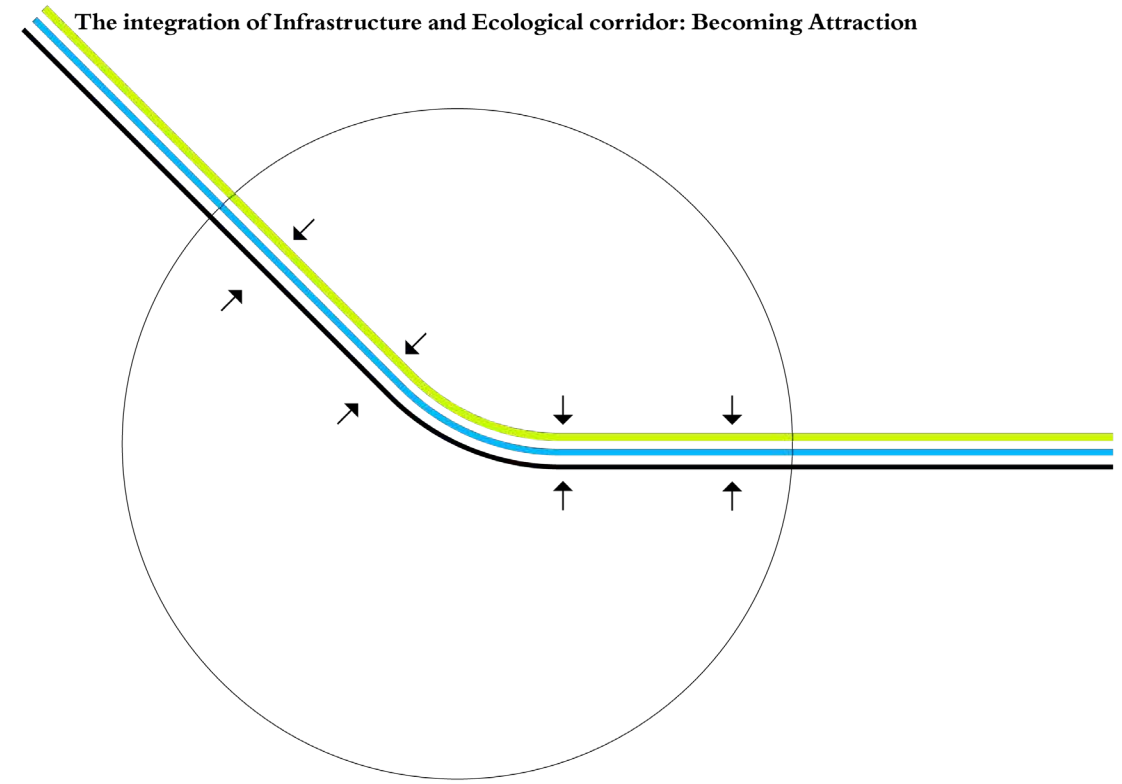

2.

The Infrastructure as a Barrier that neglect ecology system

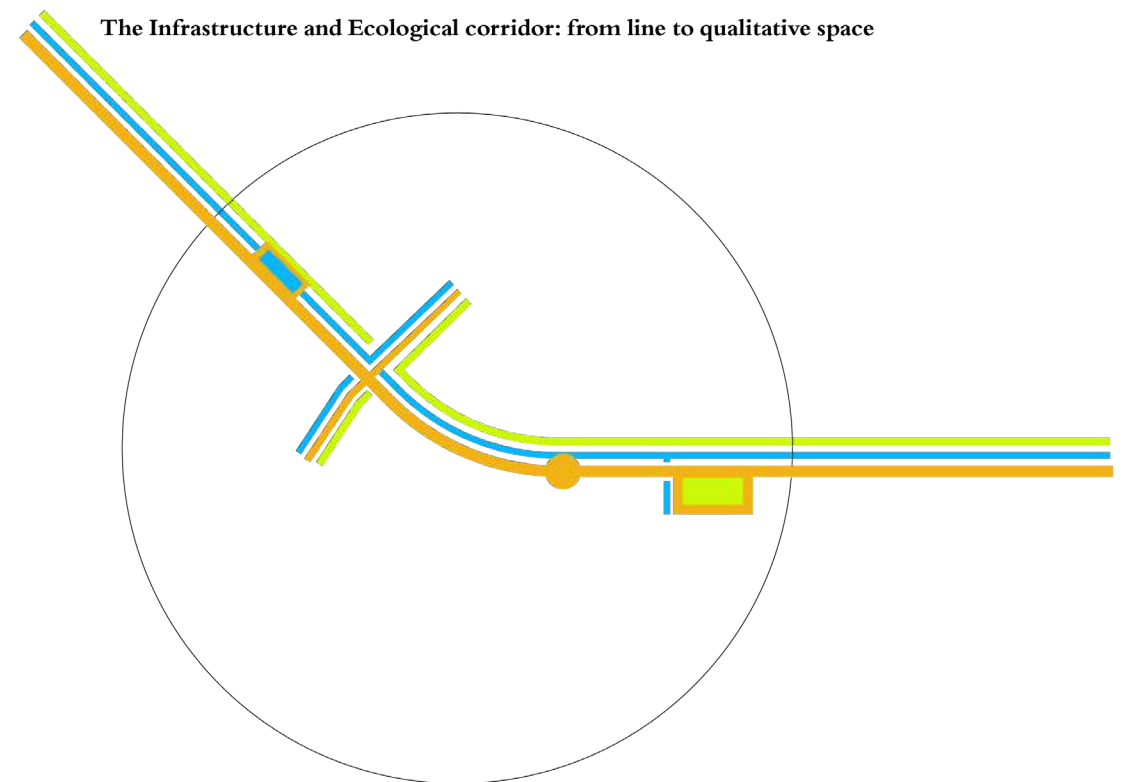

3.

The integration of Infrastructure and Ecological corridor: Becoming Attraction

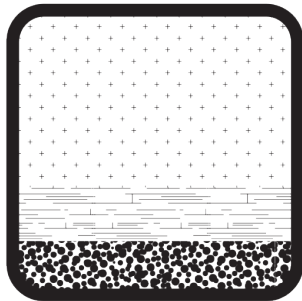

4.

The Infrastructure and Ecological corridor: from line to qualitative space

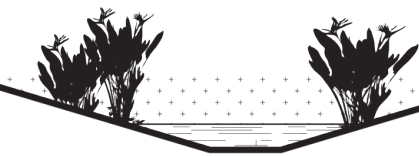

Revealing the Potential of Water

Rain Peak Water

Light rail
Proposal

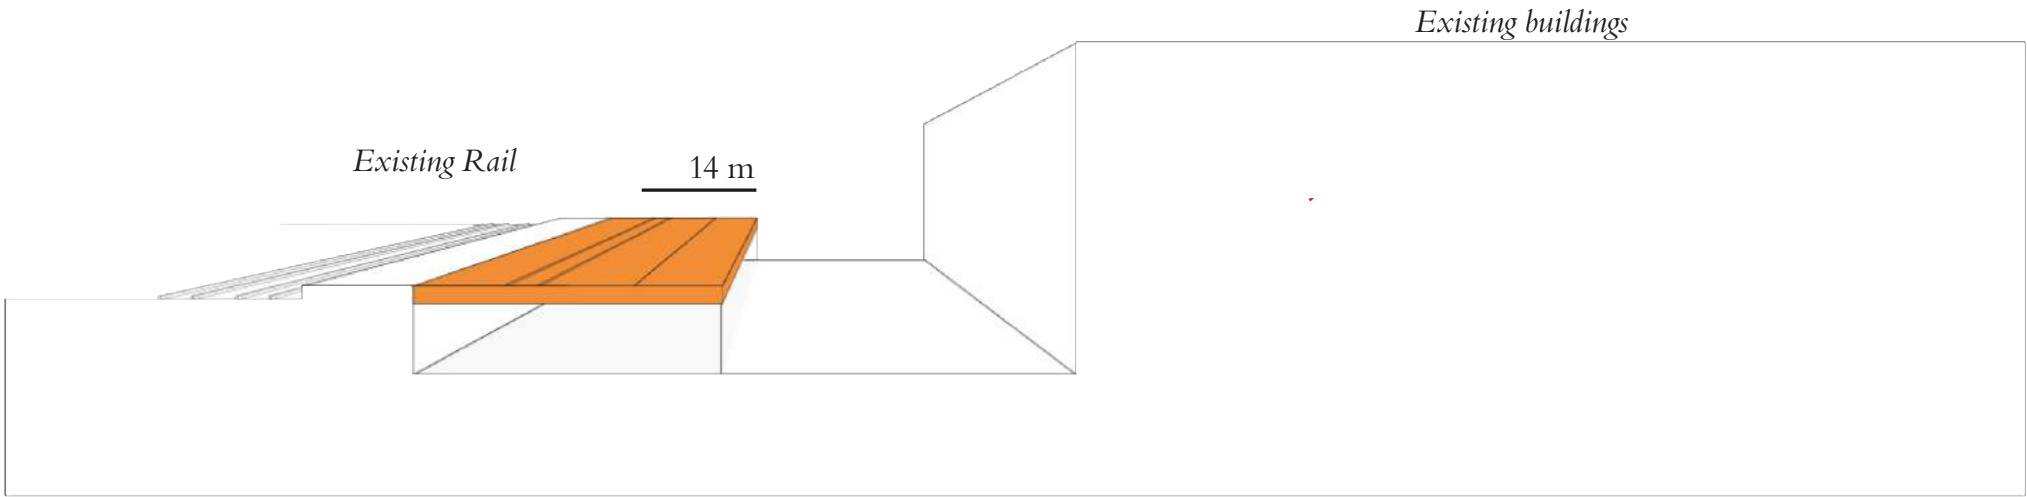

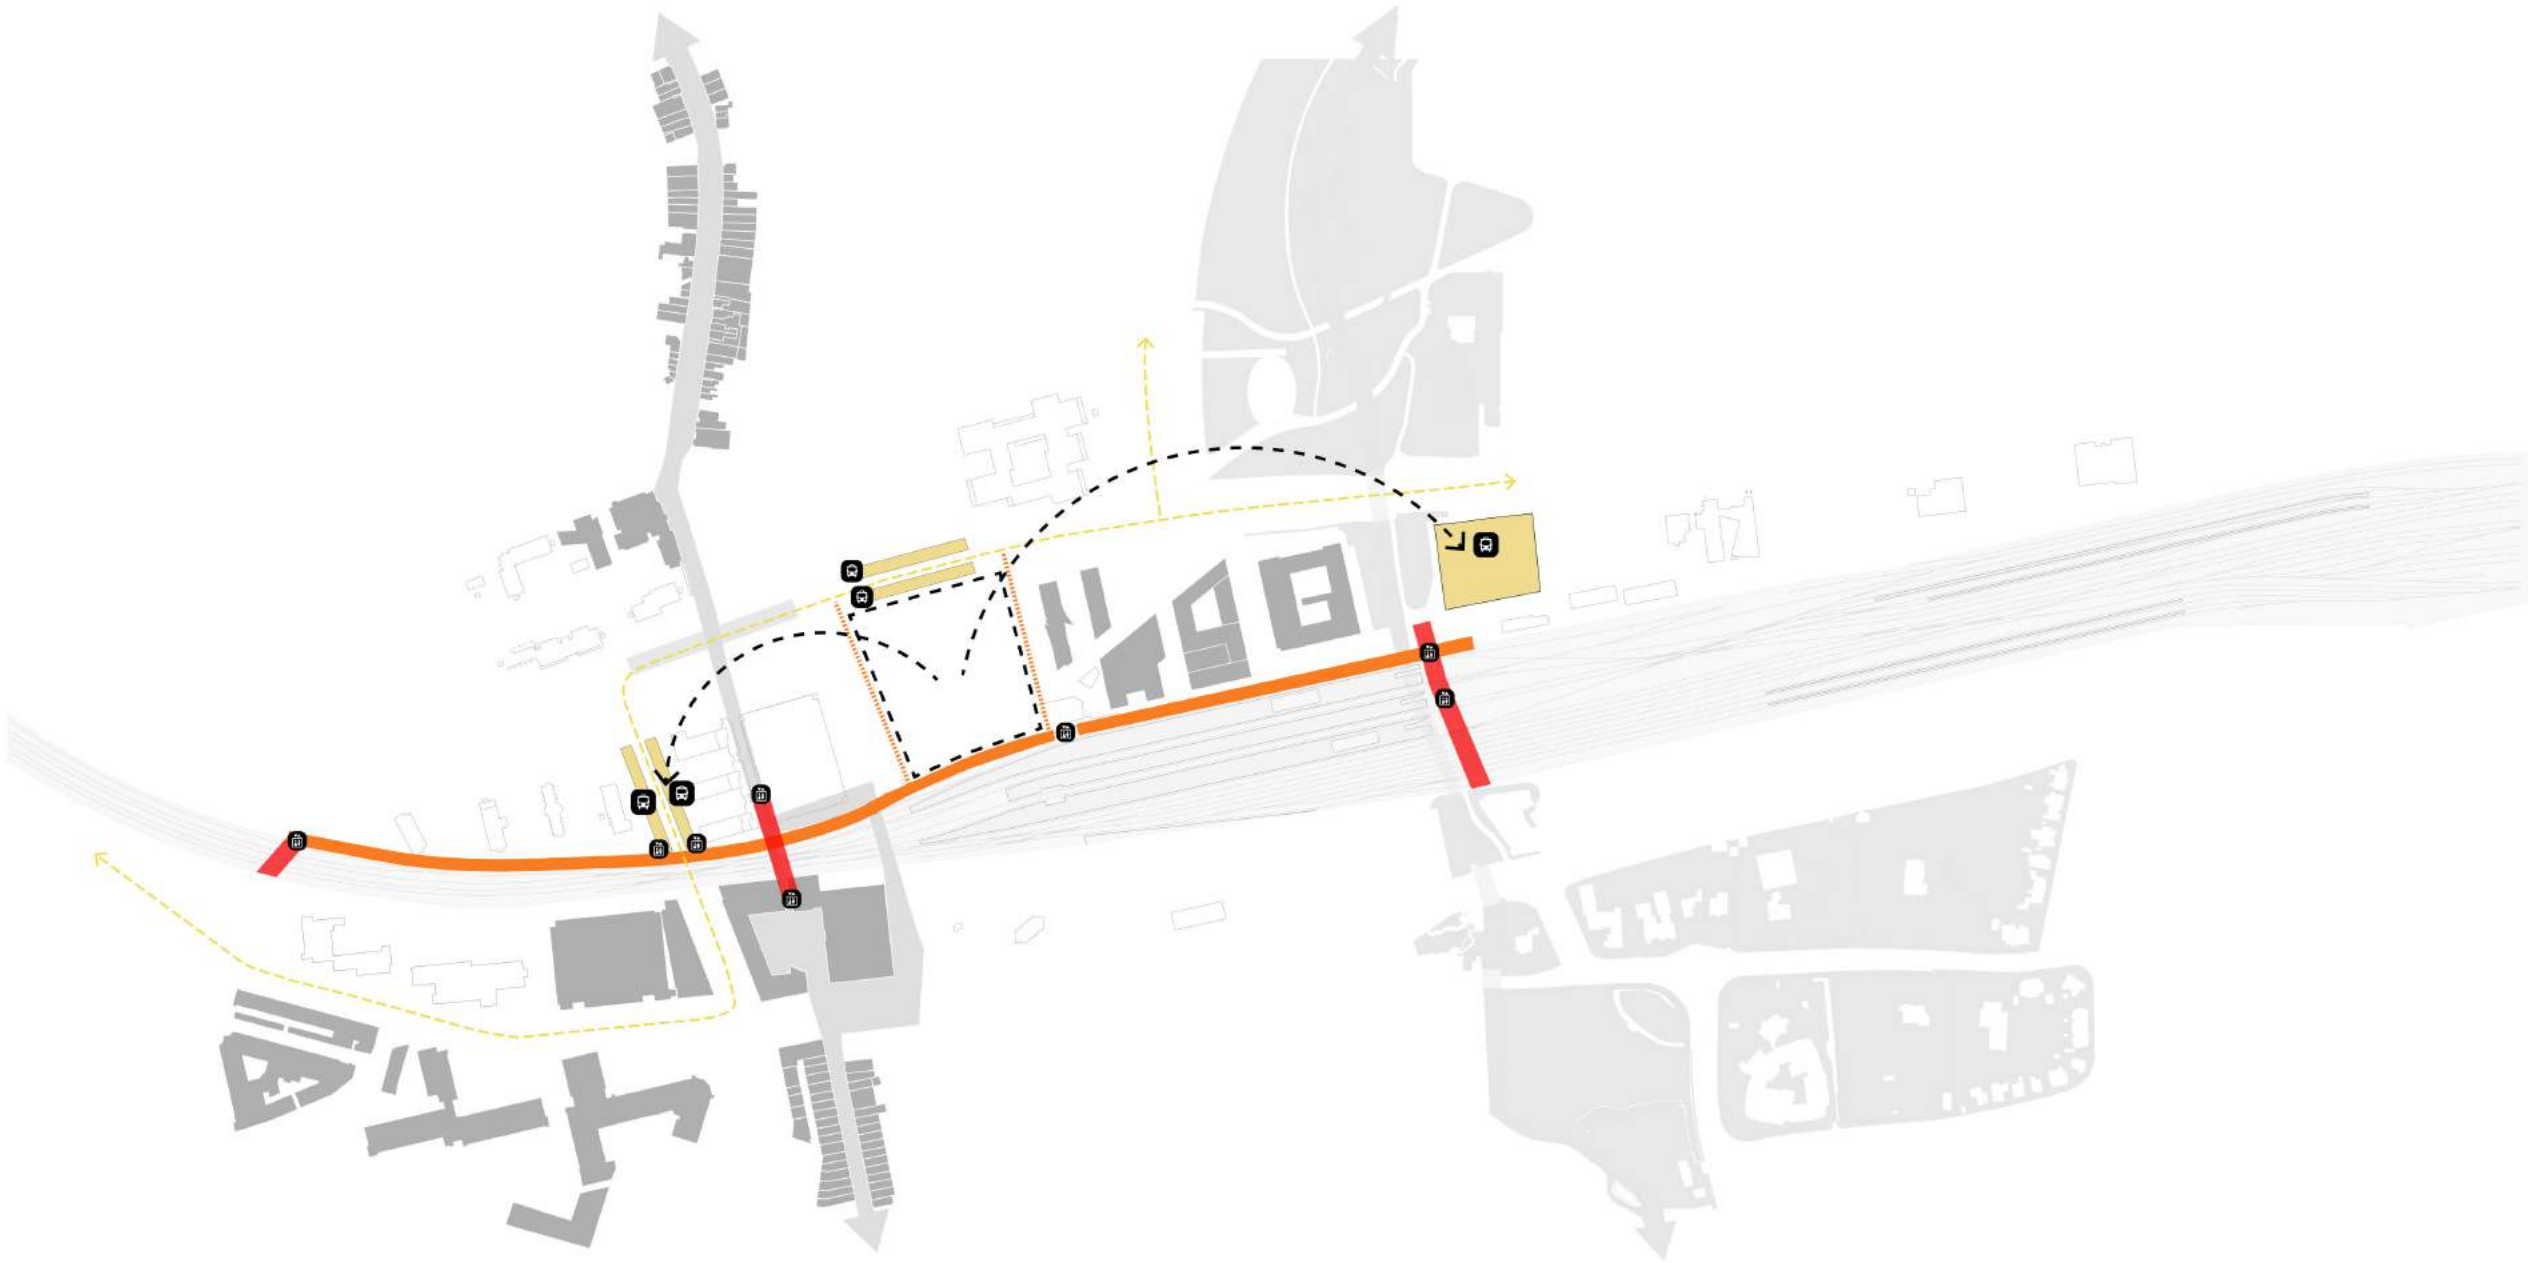

Mobility Reserve as Starting Condition

Harvesting the Potentials

Creating a Distributed and Responsive Hub, enhancing Public Space

Creating an Urban Green and Blue Network

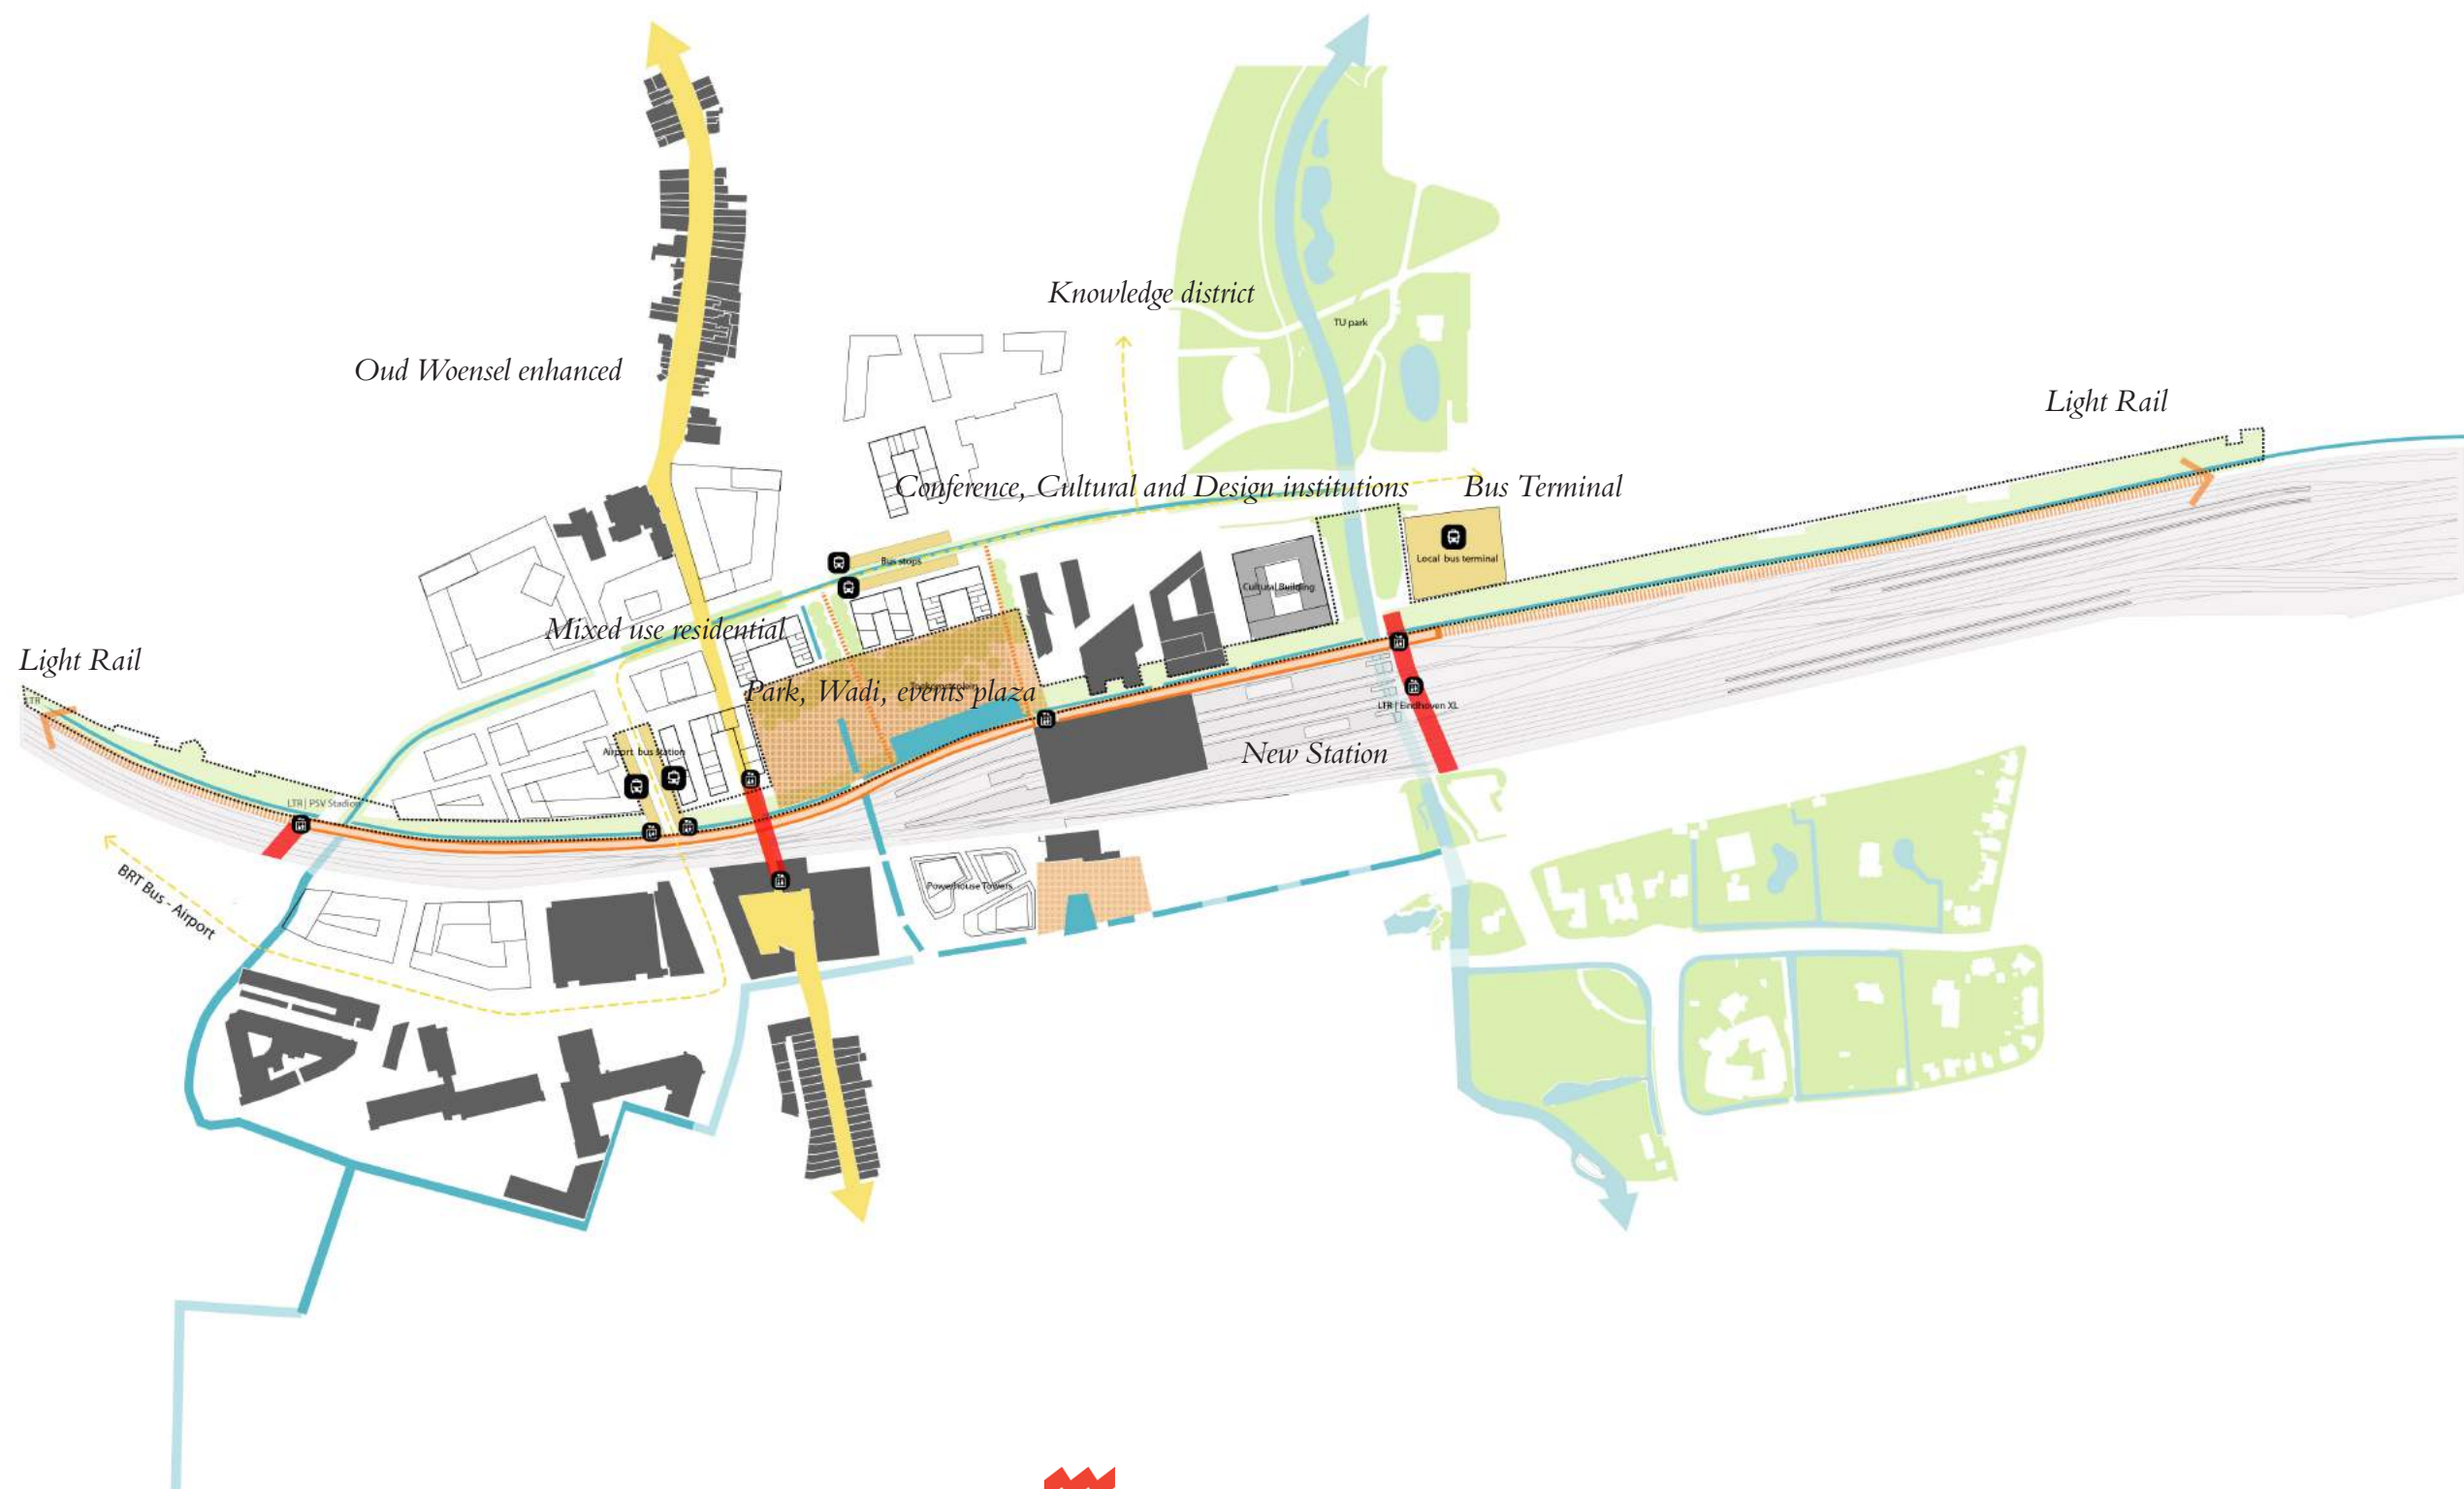

Culture, People and Nature colonizing Fellenoord

Culture, People and Nature colonizing Fellenoord

Fellenoord as Green and Blue Heart of Brainport City

Fellenoord: a New, Ecological, Vibrant Heart of Eindhoven

**Fellenoord of the Future is Integrated, Adaptable, Resilient, Connected,
Inclusive towards Nature and People.**

mobility stripe

commercial and craft activities

water retention system

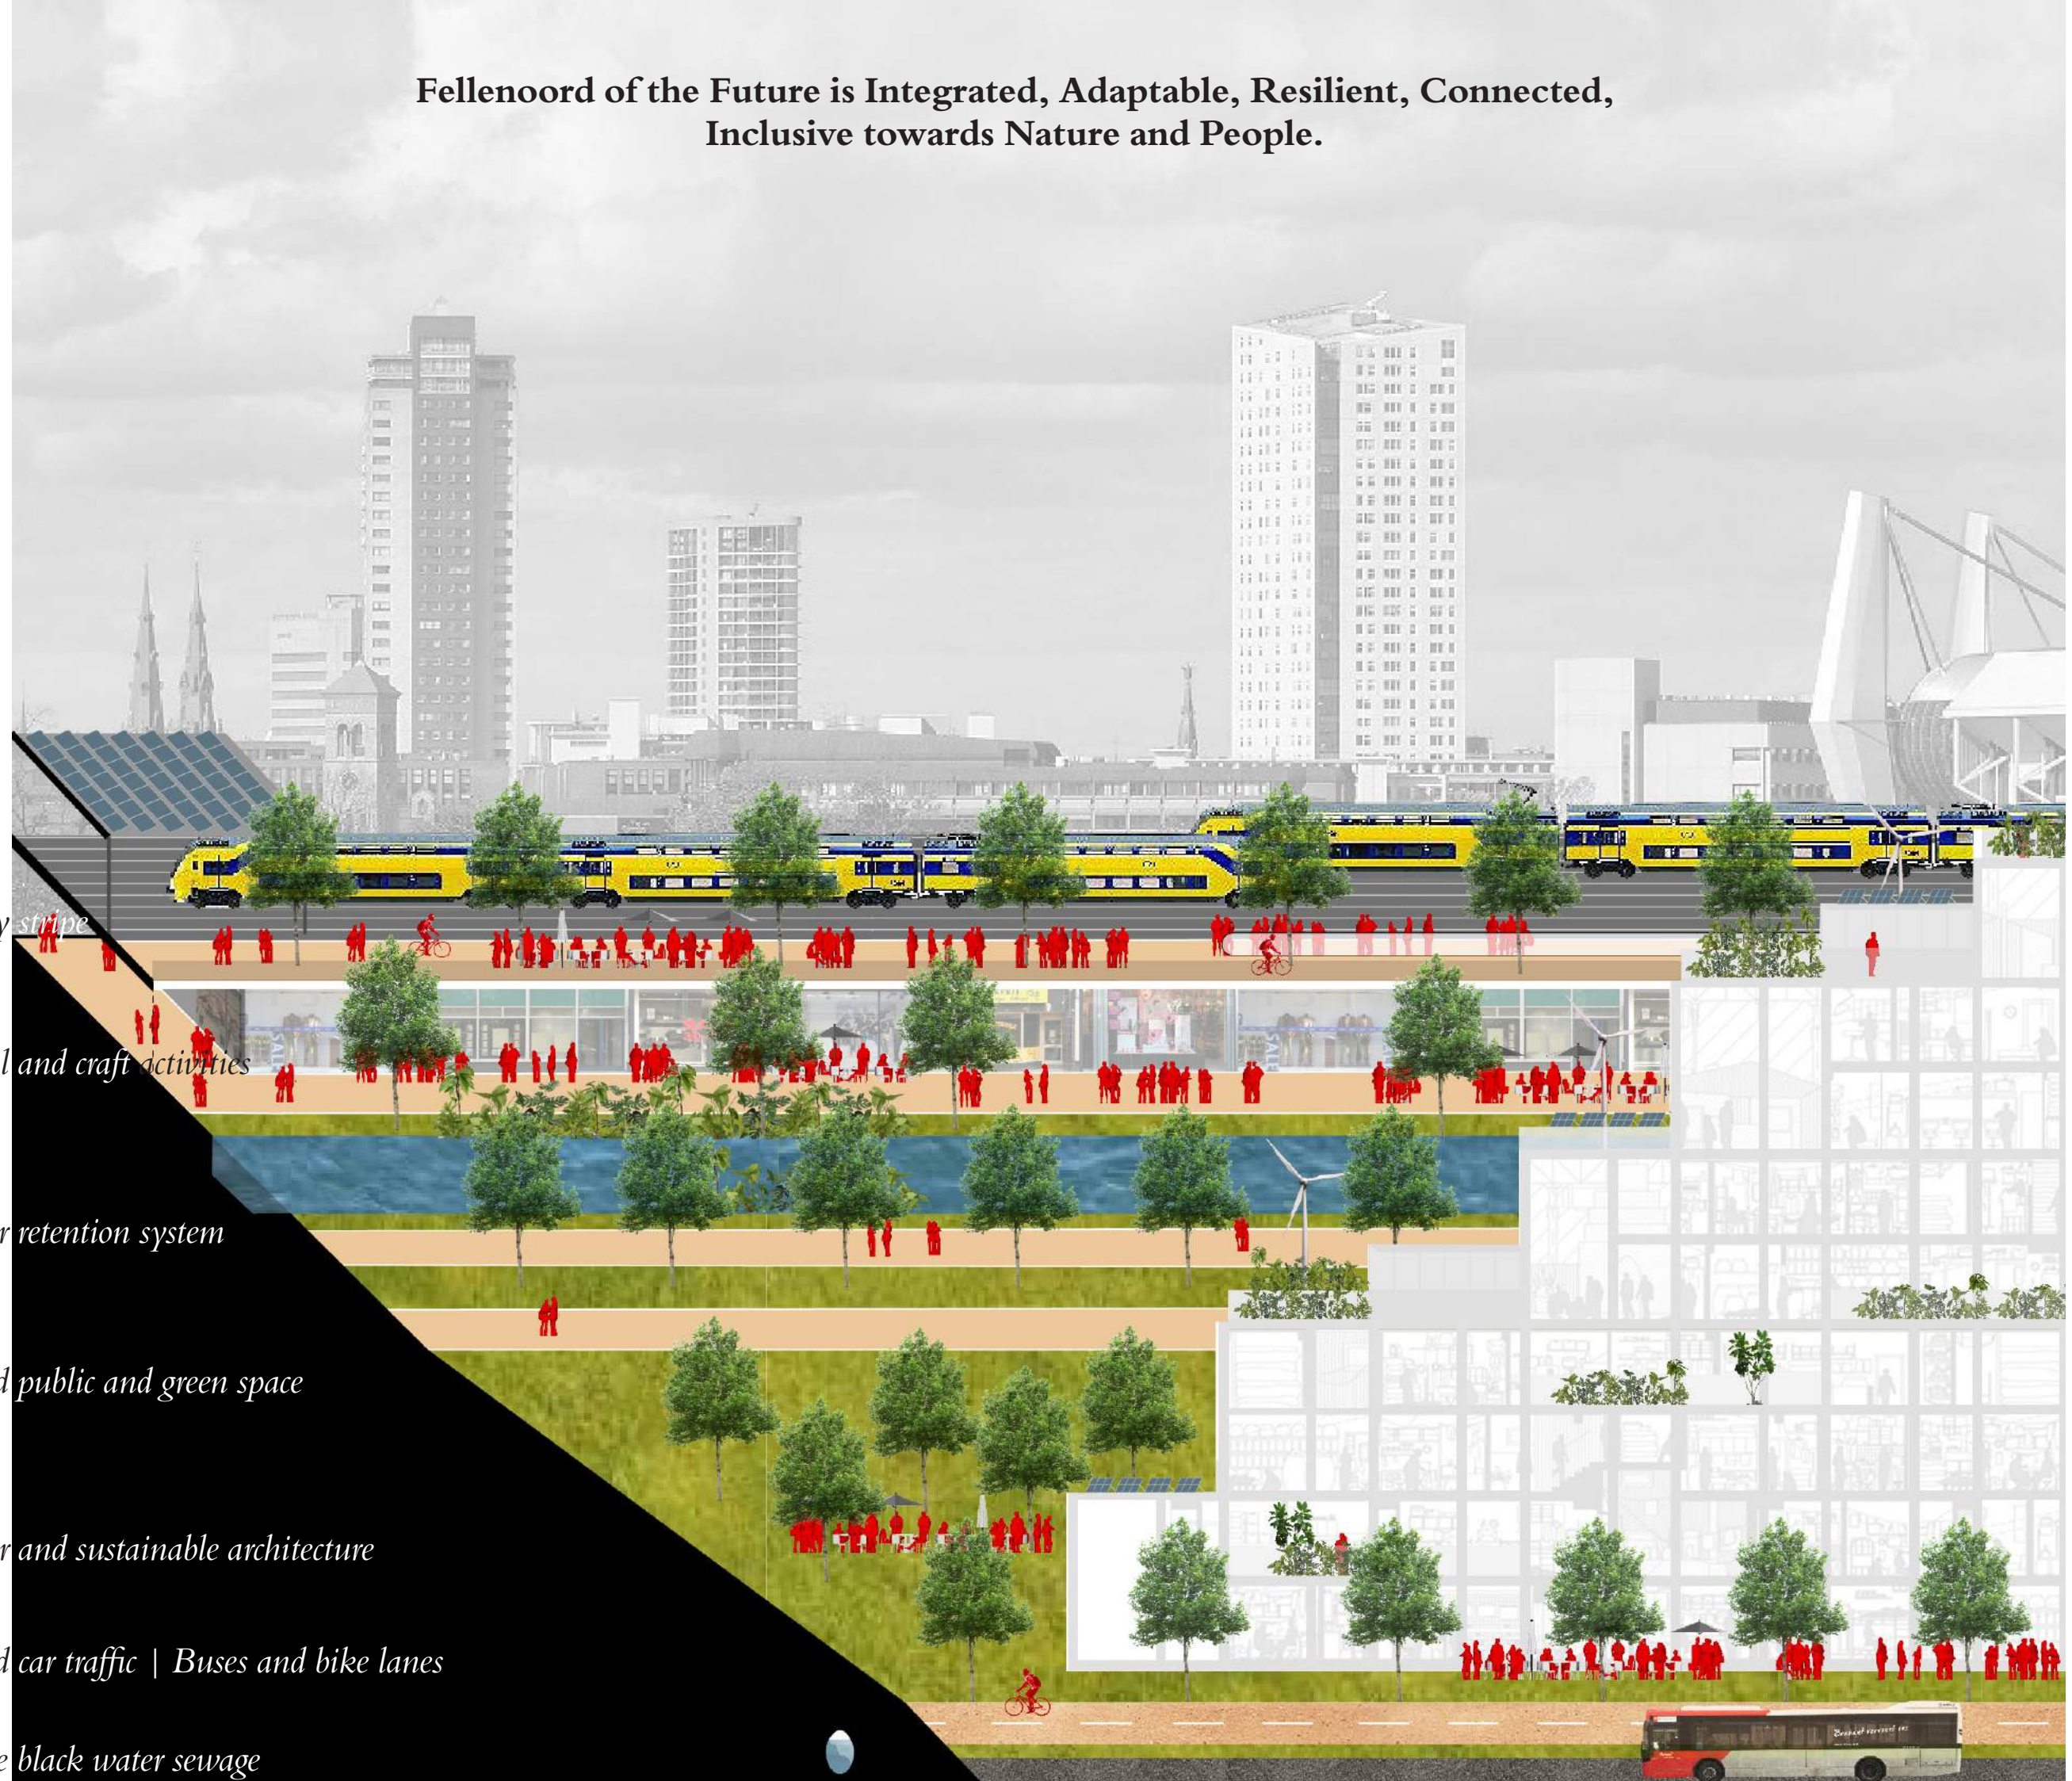

reclaimed public and green space

circular and sustainable architecture

downgraded car traffic | Buses and bike lanes

separate black water sewage

Urban Arcipelago

Connecting Local Regional and International Scales

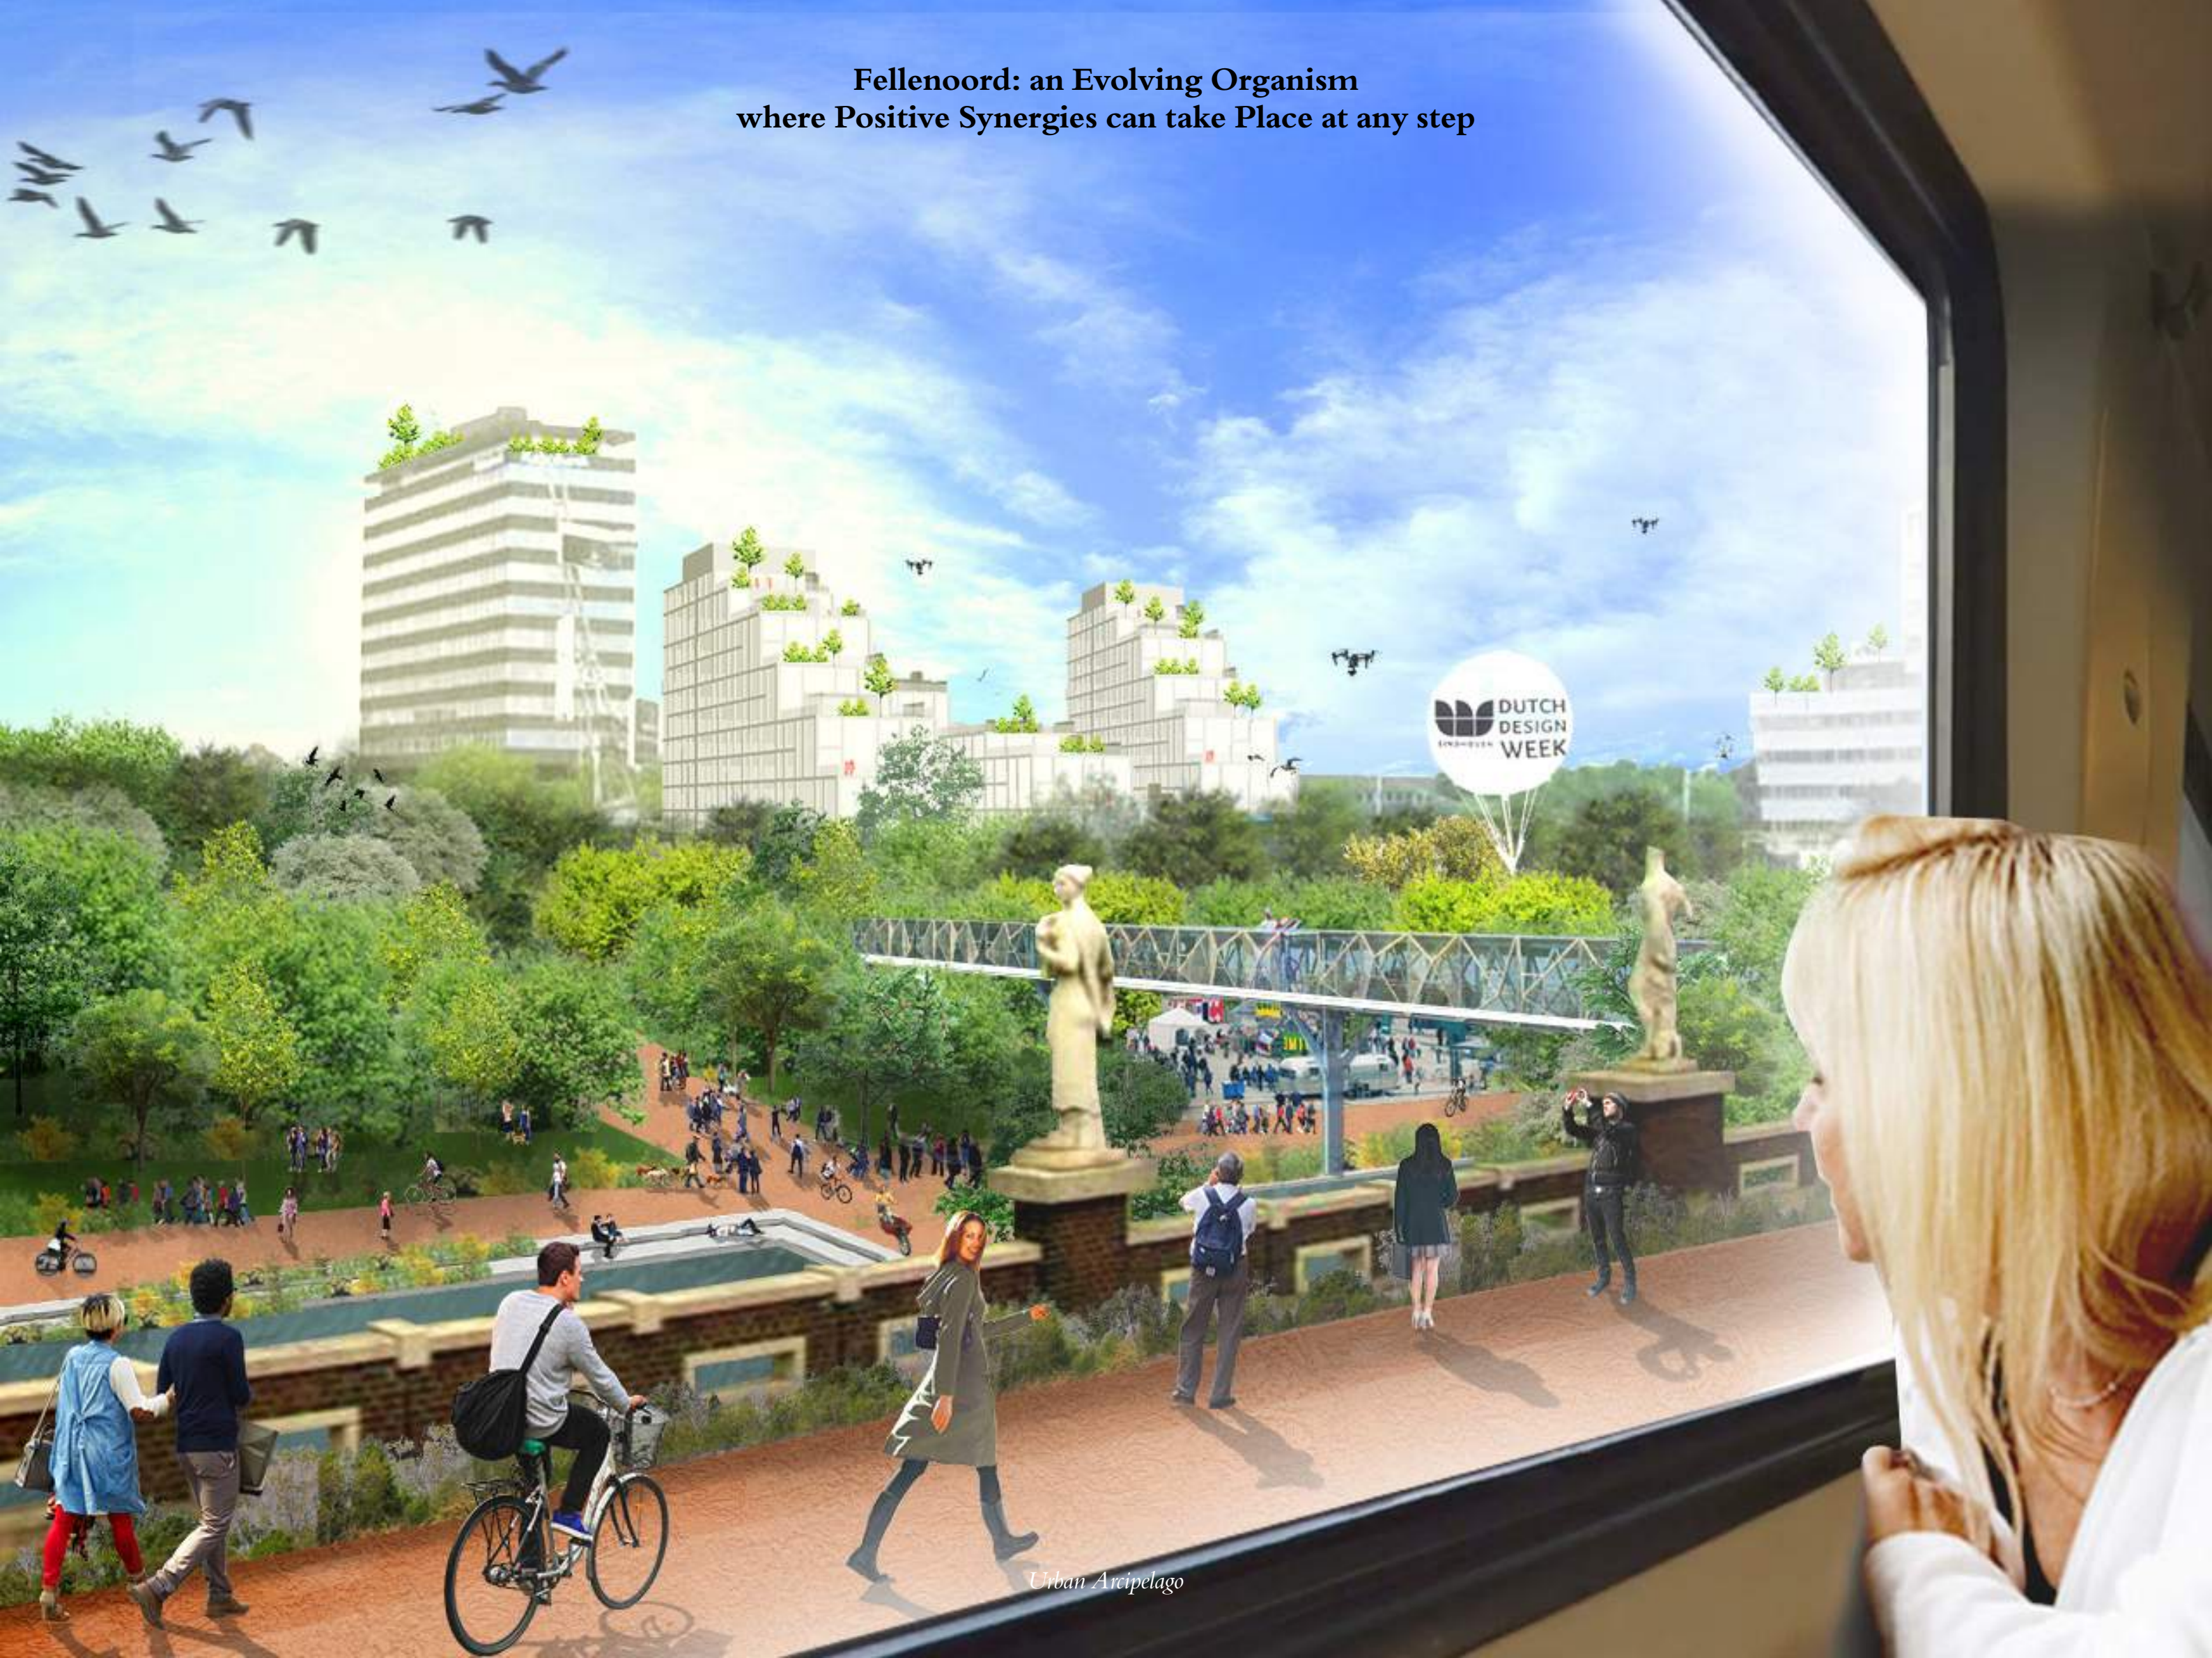

Closing the System with a Loop of Knowledge

Moving and Staying in Fellenoord as a Connecting, Quality Experience

Fellenoord: an Evolving Organism
where Positive Synergies can take Place at any step

Creating Conditions for a New Development

The City of the Future is rooted in local economical, morphological and historical aspects, to which global factors like climate adaptation, energy transition and mobility are added, not as a solution, but as inputs to set the conditions for a new collective vision.
